

UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF RHODE ISLAND

DENISE CROWE

VS.

C.A. No. 05-098T

ROBERT C. MARCHAND, MD;
SOUTH COUNTY ORTHOPEDIC &
PHYSICAL THERAPY, INC.

**PLAINTIFF'S RULE 26 EXPERT DISCLOSURE, LEO M. ROZMARYN,
M.D.**

Pursuant to Federal Court Rules of Civil Procedure Rule 26, the undersigned, Leo M. Rozmaryn, M.D., states, as follows:

A. Curriculum Vitae is attached as Exhibit "1" and sets forth my qualifications and the publications I have authored within the past ten (10) years.

B. Attached as Exhibit "2" is a list of all the cases that I have testified in as an expert at trial or by deposition within the past ten (10) years.

C. Attached as Exhibit "3" is the list setting forth the compensation to be paid for study and testimony.

D. Attached as Exhibit "4" is a complete statement as of the date of this disclosure opinions as well as the documents and information considered by the undersigned to formulate opinions to be expressed and the basis and reason therefore subject to supplementation should additional facts be brought to the attention of the undersigned which derive from depositions and discovery conducted subsequent to this disclosure.

E. Attached as Exhibit "5" is a list of exhibits which may be used in support for opinions as well as illustrations prepared for trial.

Leo M. Rozmaryn, M.D.

Dated: January 19, 2006

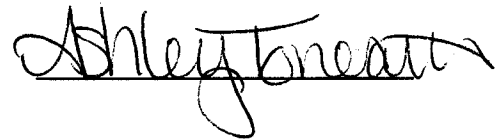

CERTIFICATION

I, the undersigned, hereby certify that I have sent a copy of the foregoing ***Expert Disclosure*** on the 23 day of January, 2006, to:

Dennis Grieco, Esq.
GIDLEY, SARLI & MARUSAK
One Turks Head Place, Suite 900
Providence, RI 02903

David Carroll, Esq.
Roberts Carroll Feldstein & Peirce
Ten Weybosset Street
Providence, RI 02903

A handwritten signature in cursive script, appearing to read "Ashley Teneant", written over a horizontal line.

CURRICULUM VITAE

Leo M. Rozmaryn, M.D.

PERSONAL INFORMATION

Born:

[REDACTED]
Brooklyn, New York

Residential:

801 Stonington Road
Silver Spring, Maryland 20902

301-593-4663 Fax

Office Address:

The Orthopaedic Center
9711 Medical Center Drive
Suite 201
Rockville, Maryland 20850
301-251-1433
301-424-5266 Fax

January 1994

Family:

Spouse Sharona
Children Adina
Yair
Yakov

SSN:

[REDACTED]

MEDICAL LICENSES:

State of Maryland	D36613
State of Virginia	0101047775
Washington, D.C.	000055147

CERTIFICATION

Diplomat, The American Board of Orthopaedic Surgery	July 1991
Fellow, American Academy of Orthopaedic Surgeons	February 1993
Certificate of Added Qualification in Surgery for the Hand – The American Board of Orthopaedic Surgeons – Recertified	September 1992 September 2001

EDUCATION

Undergraduate	Queens College B.S. Degree	1973 – 1977
Medical School	Columbia University College of Physicians and Surgeons M.D. Degree	1977 – 1981
Internship	Montefiore Hospital and Medical Center	1981 – 1982

Residencies	Bronx Municipal Hospital Center Jacoby Hospital General Surgery	1982 – 1983
	Montefiore Hospital and Medical Center Orthopedics	1983 – 1987
	Bronx Municipal Hospital Center Jacoby Hospital Orthopedics	1983 – 1987
	Hospital of the Albert Einstein Medical Center Orthopedics	1983 – 1987
	North Central Bronx Hospital Orthopedics	1983 – 1988
Fellowships	Senior Annie C. Kane Hand Fellow Hand and Microvascular Surgery New York Orthopaedic Hospital Columbia Presbyterian Medical Center	1987 – 1988
	Columbia University Completed 100 hour laboratory course I In microsurgery at College of Physicians and Surgeons Columbia University, Harold M. Dick, M.D., Director	1987 – 1988
Academic Title	Clinical Assistant Professor of Orthopaedic Surgery Uniformed Services University of Health Science Center	April 1996

CURRENT HOSPITAL APPOINTMENTS

Shady Grove Adventist Hospital 9901 Medical Center Drive Rockville, Maryland 20850	1988-Present
Suburban Hospital 8600 Old Georgetown Road Bethesda, Maryland 20814	1988-Present
Surgery Center of Chevy Chase Bethesda, Maryland	2002-Present

AWARDS AND SCHOLASTIC HONORS

1977	Dean's List Queen's College
1977	Arthur Colwin Award for Academic Achievement in Biology
1977	Dr. Jonas E. Salk Scholarship City University of New York
1997	Governor's citation: State of Maryland at the 8 th Annual Governor's Conference on Health, Safety, and the Environment
2005	Public Service Medal for participation in "Operation Lifeline" Major Maryland Defense Force Hurricane Katrina relief effort, Maryland Dept. of Health and Mental Hygiene, September 2005.

PROFESSIONAL SOCIETIES

Fellow, American Academy of Orthopedic Surgeons	1993
American Society for Surgery of the Hand	1993
Montgomery County Medical Society	1988
Maryland State Medical Society	1988
Washington Orthopedic Society	1991
Eastern Orthopedic Society	1994
Performing Arts Medical Association	1991
Maryland State Committee for Medicine and the Performing Arts	1991
American Association for Hand Surgery	1994
National Capital Society Surgery of the Hand	1994
Robert E. Carroll Hand Club	1994

ORGANIZATIONAL ACTIVITIES

Montgomery County Medical Society - Young Physicians' Committee	1990 - 1991
Bethesda Naval Hospital - Volunteer consultant in hand surgery	1989 – 1991
Shady Grove Adventist Hospital - Medical Education Committee	1989 – 1992
- Infection Control Committee	1996 – 1997
- Strategic Pediatric Planning Committee	1996
Music Medicine Clearing House The Medical and Chirurgical Faculty of Maryland Advisory Board	1992 – present
Outcomes Study Committee American Society for Surgery of the Hand - Peter C. Amadio, M.D., Chairman	1995, 1996, 1997
Regional Representative of the American Foundation For Surgery of the Hand, Baltimore-Washington area	1996 – 1997
Advisory Board – Governor's Task Force on Ergonomics, University of Maryland School of Occupational Medicine Received Governor's Citation	1996
Secretary – Treasurer, The Washington Hand Society Vice-President, The Washington Hand Society	1999 – 2000 2000 - 2001
President , Washington Society for Surgery's of the Hand	2002 – 2003
Vice President – The Kemp Mill Synagogue	2000 – 2001

e) Deposition of Dr. Richard Black and all the exhibits attached thereto, dated October 6, 2005.

f) Deposition of Dr. James P. Omanski and all the exhibits attached thereto, dated October 6, 2005.

g) Deposition of Dr. David Burns and all the exhibits attached thereto, dated October 19, 2005.

h) Deposition of Dr. Edward Akleman and all the exhibits attached thereto, dated October 18, 2005.

i) Deposition of Richard Moffit, PT and all the exhibits attached thereto, dated October 20, 2005.

2. The opinions set forth herein are based upon a reasonable degree of medical certainty.

3. A review of the 10/20/04 x-ray indicates:

- a) Angulated fracture
- b) Widening of scapholunate joint

4. The x-ray films of 11/5/02, 12/26/02, and 4/11/03 indicate widening of the scapholunate joint and angulated fracture.

5. The widening of the scapholunate joint indicates a tear of the scapholunate ligament.

6. The tear of the scapholunate ligament is evident in:

X-ray Films:	10/20/02
	11/05/02
	12/26/05
	04/11/03

MRI Film:	04/12/02
-----------	----------

7. The MRI of 11/12/02 show widening of scapholunate joint and absence of scapholunate ligament which is indicative of tear of scapholunate ligament.

8. The MRI of 11/12/02 show fluid accumulation adjacent to ulnar bone which indicates a tear of the triangular fibrocartilage.

9. On 10/21/02, Dr. Marchand failed to diagnose a scapholunate dislocation and incorrectly diagnosed a non displaced distal radius fracture.

10. Dr. Marchand is incorrect in his diagnosis because there is greater than a 10 degree dorsal angulation of the distal radius articular surface. Furthermore, there is a greater than 5 mm of widening of the scapholunate articulation.

11. The MRI of 11/12/02 shows evidence considerable widening of the scapholunate joint with an absence of the scapholunate ligament which is indicative of a ligament tear.

12. The MRI of 11/12/02 shows evidence of tear of triangular fibrocartilage.

13. The appropriate course of treatment on 10/21/02 and no later than 11/14/03 would have been operative repair of the fracture and scapholunate ligament and possibly the triangular fibrocartilage.

14. On 11/14/02, Dr. Marchand prescribed a conservative course of treatment consisting of wrist splint, physical therapy and medication.

15. The course of treatment prescribed by Dr. Marchand was a deviation from acceptable medical care provided by orthopedic specialists for the following reasons:

- a) Operative treatment was required to achieve a normal result.
- b) A delayed surgery resulted in a salvage type of operation, the consequence of which were greater loss of mobility and flexion in the patient's wrist and far greater likelihood of post-surgical pain.

16. The applicable standard of care would have been operative treatment consisting of:

- a) Primary repair of the scapholunate ligament
- b) Capsulodesis
- c) Pinning

17. The operative treatment should have been performed before the patient developed symptoms of RSD.
18. After the diagnosis of RSD was made, the patient should have undergone a more extensive work up such as a bone scan and electrodiagnostic tests looking for a post-traumatic carpal tunnel syndrome.
19. The surgery performed by Dr. Akleman on 5/13/03 was a salvage type surgery to give the patient some sort of result that is workable so that she could get on with her life and to minimize the disability.
20. If the surgery had been performed on in October 2002, the objective was to achieve normal functioning of the right wrist.
21. The deviation in the standard of care by Dr. Marchand resulted in a more extensive surgery consisting of a fusion, which resulted in a 50 percent loss of mobility (flexion/extension/movement) of the right wrist.
22. The fusion increased the patient's impairment and future disability and could have been avoided if surgery was performed in October 2002.

RE: CROWE, DENISE

Dear Ms. Marotti:

I have been asked to review the case of Ms. Denise Crowe with regards to whether or not the standard of care had been breached regarding the care afforded her by Dr. Robert Markham.

As you know, Ms. Denise Crowe was injured in a rollerblading accident on October 20, 2002. X-rays from that time revealed a displaced and dorsally angulated distal radius fracture, a scapholunate dissociation and the beginnings of a the development of a dorsal intercalated instability pattern, which was treated nonoperatively in a cast and allowed to heal with a persistent dorsal angulation of the distal radius and the development of a static scapholunate dissociation with a dorsal intercalated segment instability pattern requiring an eventual scaphocapitate fusion approximately seven months later. Apparently, Dr. Markham noted that the patient has scapholunate dissociation one month after the initial injury and it was decided to continue nonoperative treatment for this patient.

Of interest is the following: Despite the fact that the original x-rays showed the scapholunate dissociation, no mention of it is made in the emergency room record and the office note dated 10/21/02 shows that his impression was a nondisplaced distal radius fracture. I disagree with that as there is greater than a 10-degree dorsal angulation of the distal radius articular surface. To say that this is nondisplaced is simply not correct. There is no mention of the scapholunate ligament. The note that was rendered on November 5 showed clinically the scaphoid looks fine, and there is a little widening of the scapholunate joint. In reality, there is greater than 5 mm of widening of the scapholunate articulation and that is never expressed. The MRI dated November 12, 2002 showed "evidence of considerable widening of the scapholunate joint with a poorly defined ligament at this position. There was also evidence of a tear of the triangular fibrocartilage complex." Despite this, Dr. Markham's note dated November 14, 2002 indicated

that he would favor conservative treatment. However, the option of reconstructing the ligament was outlined to her. It is critical to note that the possibility of a ligament reconstruction was outlined to her. However, there was an error in judgement here in that the operative treatment would have been the "conservative path" in this case, as the best chance for reconstitution of the wrist kinematics is a direct repair of the scapholunate ligament with a dorsal capsulodesis. This would have afforded the patient the best chance of recovery. Traditionally, I feel that the distal radius should have been realigned into a more anatomic position.

She began physical therapy at the end of November 2002. By the end of December, she was noted to have weakened grip, swollen fingers and dramatically increased pain with the presumptive diagnosis of "reflex sympathetic dystrophy." She continued physical therapy and by mid-January 2003, she has "significant RSD symptomatology" with worsening of the condition despite the fact that she had been placed on Elavil on the previous visit. She was given an increase in her Elavil. By February 2003, she was noted to also have dysfunction in her shoulder and elbow. She continued with physical therapy. In April 2003, she was noted to have problems with her wrist when she rolled her wrist from side-to-side and was noted to have "general carpal instability." Dr. Burns referred her for hand surgery evaluation at that time.

She was referred to and seen by Dr. Edward Ackerman who, in May 2003, had the patient undergo a right carpal tunnel release, scaphocapitate fusion, extensor pollicis longus transposition and dorsal ulnar capsular release. I believe, in reviewing this case, there was a great deal that was missed by the primary treating physician, Dr. Robert Marchand, with regards to Ms. Denise Crowe's condition. I believe the responsibility is Dr. Marchand's, and not the physical therapist.

A thorough review of this patient's original x-rays would have revealed not only a scapholunate dissociation but also a dorsally-angulated distal radius fracture that, in my opinion, was angulated of what is today considered acceptable. By virtue of the fact that a carpal tunnel release was eventually performed, it is quite possible that her "reflex sympathetic dystrophy" may well have been due to an acute then later subacute post-traumatic carpal tunnel syndrome which is quite common in distal radius fracture. After Dr. Marchand was apprised of

Page 3

the fact by Mr. Moffat that the patient had a scapholunate dissociation, it was elected not to treat this patient for this problem in a definitive way when a soft tissue procedure may have sufficed. This resulted in the patient requiring a scaphocapitate fusion later which is a far more aggressive treatment and much more limited and "salvage type" result. After the diagnosis of reflex sympathetic dystrophy was made, the patient should have undergone a more extensive workup for this such as a bone scan and electrodiagnostic tests looking for a post-traumatic carpal tunnel syndrome which was not done. In fact, even in the final films after the scaphocapitate fusion had been performed, the underlying malunion of the distal radius still had not been addressed. In general, it is quite possible to get a reflex sympathetic dystrophy after a distal radius fracture even with the best of care and it may be difficult to connect the mere fact that patient had nonoperative treatment for this problem with the development of the RSD. In general, RSD develops in a distal radius fracture when there is some kind of concomitant nerve injury. This should have been worked up more thoroughly.

It is therefore my opinion that the community standard for the treatment of this distal radius fracture, scapholunate dissociation and possible post-traumatic median neuropathy had been indeed breached and that this patient's long-term final outcome could have been altered by more definitive early treatment.

Yours sincerely,

Leo M. Rozmaryn, M.D.

LMR/lis
